

This application is for those who wish to run, quickly and efficiently, a macro or several. Running a macro has never been easier thanks to the KINDLEMACRO application. Simply select the macro you would like to run, then click the "Run Macro" button to run it. No need to fuss about with a code, just load the macro and run it! Macros can range in complexity from a simple cut and paste job to a rather complicated series of procedures, including, for example, shifting cells in several columns and rows at once. And with KINDLEMACRO it is quite easy to do. Because KINDLEMACRO runs macros, you can assign different parameters to each macro for a more convenient execution. For example, you could assign the "Modify cell" macro for one set of parameters and the "Get cell content" macro for another set of parameters. KINDLEMACRO allows for a wide range of parameters that can be assigned to a macro. The use of these parameters allows for a much more streamlined macro execution. This program is extremely useful for those who use computers and who wish to streamline their computer usage as much as possible. KEYMACRO Benefits: ● Run macro with a single click. ● Use different parameters for each macro to improve macro execution. ● Assign various parameters to each macro. ● Assign different actions to each macro. ● Assign a macro to any button on the keyboard. ● Assign a macro to a predefined key. ● Run a macro with any button on your keyboard. ● Run a macro with a single click. ● Automatic transfer of parameters and macro results. ● Macro history. ● Standard settings. ● Greatly reduces a user's keypresses when macro execution is required. ● Allows you to run macros from any applications on the computer. ● Macro recorder. ● You can export macros to text files. ● Macros can be triggered from the register. ● Macros are disabled when the application is closed. ● Macro Hotkeys:

Macro for enabling/disabling security keys (as contained in commercial versions of ezProxy) for individuals and for groups. ezProxy security keys are a feature commonly used for protecting the privacy of sensitive information such as credit card numbers, login names and passwords, etc. ezProxy comes with a built-in facility to automatically switch off the security keys when a new ezProxy user account is created or when the ezProxy software is re-launched. ezProxy security keys are a feature commonly used for protecting the privacy of sensitive information such as credit card numbers, login names and passwords, etc. For these types of information, it is a security risk to transmit the information across the network without the knowledge of all users. This control provides the ability to switch off ezProxy security keys when a new ezProxy user account is created or when the ezProxy software is re-launched. Security Rules - Individual Controls (Policy 1): When an individual user or group is added, the ezProxy administrator can choose whether to enable the security keys or not. In the ezProxy control panel, this is indicated by a check mark beside the individual's name. Security Rules - Group Controls (Policy 2): When a group (multiple users) is added, the ezProxy administrator can choose whether to enable the security keys or not. In the ezProxy control panel, this is indicated by a check mark beside the group's name. ezProxy Manual - Security Keys (Policy 3): This policy allows the administrator to make the following changes to the security keys : Change the default keys that are used when no keys are specified. Disable all security keys at once (see note 1). Note 1 : See the ezProxy Manual for more details. ezProxy Manual - Enable/Disable individual security keys (Policy 4): This policy allows the administrator to make the following changes to the security keys: Enable the security keys for the specified individual or group. Disable the security keys for the specified individual or group. Note : When a security key is enabled, it allows all the individual or group users to bypass the automatic

security key switch-off when the ezProxy software is re-launched. Note : The default keys are : LoginName: Password : Key00: Key01: Note : The login name cannot be changed to loginName1 and the password cannot be changed to password1.
