KODAK PIXPRO 360 STITCH Crack+ For Windows

KODAK PIXPRO 360 STITCH packs a minimalistic, user-friendly interface that features a few interactive functions, which can be easily accessed directly from the main window. The application also features a standard menu, which can be used to import videos, open existing projects or save your current progress on the computer. PUBLIC SAFETY ACTION CAMERA Philips Government Solutions (PGS) offers a range of tools to enable professionals and citizens to create 360 degree content that can be viewed and explored in virtual reality. The world's first fully integrated VR solution for the police and emergency services sector, the Philips Government Solution 360 VR Video system utilises a high-speed imaging platform from the consumer electronics firm to capture the live action video from the field. The Philips Government Solution 360 VR Video system is designed to help journalists, police officers, and other professionals more rapidly gather the first-hand evidence and understanding they need to inform the public and successfully prosecute criminals. The system is also incredibly useful for first responders such as ambulance drivers, firefighters and other emergency services personnel, allowing them to interact with the public in realistic ways and making victims feel less frightened and helpless. Such a tool is imperative for the police to not only collect the evidence, but to also establish a rapport with the public, reducing the likelihood of violence and the risk of escalation during potentially dangerous situations. The PGS platform is a high-quality fusion of hardware and software, designed to bring 360 degree images and videos from a first-person camera mounted on a police car or helicopter to a compatible computer. The experience is then overlaid onto a high-resolution dome screen or VR headset, giving the viewer a 360 degree VR environment in which to navigate. The PGS platform features a high-speed camera that can capture 360 degree images at 12 MP, recording at up to 60 FPS and capturing 6 channels of footage. When it is connected to a high-resolution dome screen, or to a VR headset, the viewer can navigate 360 degrees to experience the scene from various angles. The system is controlled via a Universal Serial Bus (USB) cable which connects the camera to the computer. The high-definition dome screen that sits inside the police car can be connected to any HD ready TV, or can be used with VR headsets such as Oculus Rift, Google Cardboard, Samsung Gear VR, HTC Vive or other VR headsets.
