Easy-to-use: StoreMan is designed to be used by people who are not computer experts. So it does not need any manual instructions and can be launched by clicking the StoreMan icon in your desktop. **A user-friendly GUI:** The StoreMan GUI is very easy to use. All settings for storage and search are set by selecting an appropriate button in the main window. The rest is explained in detail in the help window or by right-click. **Searchable:** StoreMan can save your search results with keywords and file names (file paths) in a text file. If a file does not appear in the results, it will be added automatically, provided that the file was recently modified and not in a safe-mode. The results of a search are displayed as a list (checkbox - check for updates of a file, subdirectory,...) in the main window, which can be further filtered by a number of parameters. You can easily remove results that you no longer need. A good feature is that you can change the text color of the results in the list. **Additional options:** There are many more settings available for the storage and search features of StoreMan that allow you to fine-tune your settings and get your own perfect file backup. The storage options, which are located in the menu Options / Storage, give you the possibility to save only the files that match your search criteria or to backup all files. You can either choose to store the files online in a web directory or on a network drive. If you select the network storage option, you have the following options: **Do not compress the files:** Store only the filenames and the path names of the files. **Store in Zip:** Store the files compressed with the Zip compression algorithm. **Store in TAR:** Store the files compressed with the TAR compression algorithm. **Custom Compression:** Choose a custom compression algorithm for the compression. **Create files with same names:** Create new files with the same names as the originals (if necessary). **Combine archives:** Combine archives by storing them in the same folder. **Interrupt archive:** Interrupt archiving to upload the files to a web directory when the original file is modified. **Offline:** Store the files in a temp

directory. Offline: Upload the files to a web directory. Deliver the files:
Deliver the files to a web directory. Deliver

StoreMan is a small and easy to use application. It aims at providing an easy way to backup and archive digital documents on non-volatile (hard disk, USB storage), network and Web accessible (Windows share) file systems. It is also able to store files on FTP, WebDAV, Amazon S3 or other Web-accessible remote storage. Requirements: Windows 2000 / XP / Vista / 7 / 8 / 10. Features: StoreMan's main advantages compared to traditional backup tools are that it doesn't require drivers for the storage devices and its files are accessible as normal Windows files, from any folder. File attributes like permissions or ACL are preserved as well. StoreMan features a wide range of native plug-in modules that make it capable to support most of the features mentioned above, and many more. StoreMan's capabilities are pretty much unlimited, making it possible to have unlimited number of storage devices and any amount of media files on each. Limitations: StoreMan has no support for network and WebDAV based archives yet. It requires the storage devices to be physically attached and accessible from the local disk, although the paths to the storage devices can be redirected. It requires at least Windows 2003 and Vista to be installed. Download: See also: New version: See also: Supported platforms: StoreMan is a native Windows application. It has been tested on Windows 2000 / XP / Vista / 7 / 8 / 10. The Windows 7 support is provided by our partner CodeCast. The Windows 8 support is provided by our partner Trugloff - and some limitations still exist, but it works pretty well. StoreMan doesn't require any third-party software to use the native archive features. Download StoreMan for other platforms: See also: About StoreMan: StoreMan was originally developed as a project for FOSSA. The project is closed source and the code is available at About FOSSA: FOSSA is a non-profit, non-commercial organization dedicated to improving software development and the user experience, focusing on digital media and workflow applications. Its mission is to encourage high quality, lean software development practices, and support both developers and users through user-oriented research and
