What is Sawmill? Sawmill is a robust, object-oriented framework for building highly complex, component-based, 3D designs. Sawmill is based on the idea that you can divide and abstract a design into simple object classes. Each of these

classes are placed in a collection hierarchy, such that the top level is a “Container” class, with multiple classes as sub-containers. Each of these “containers” contains a set of components (i.e. a voxel of a tree-like design). Since Sawmill is built using the Unity Engine, the same design, components, and materials can be used on mobile phones, smart phones, game consoles, and PCs, for example.

Q: Javascript - Select - Add One to Number - Adding One to Number I'm getting started on JS and have a question. I'm trying to create a HTML page where I can select a number and add one. What am I missing? Here is what I have:

```
document.querySelector("select").addEventListener("change", function(){ let text = document.querySelector("textarea").value; let newNumber = parseInt(text) + 1; document.querySelector("input").value = newNumber; });
```
